

Team Task & Workload Manager

1. Overview

Our HRMS needs a way for **Admins** to assign tasks to **Teams** (one or more employees) and track their progress. You are tasked with building a MVP (Minimum Viable Product) that allows for task creation, multi-user assignment, and status tracking.

2. User Roles

- **Admin:** Can create tasks, view all tasks, and assign multiple employees to a single task.
- **Employee:** Can view only the tasks they are assigned to and update the status of those tasks.

3. Role Management

- You are required to use Spatie Laravel Permission to manage user roles and permissions.
- Roles (Admin, Employee) must be implemented using this package instead of a custom role field logic.

4. Technical Requirements

Backend (Laravel & MySQL)

You must implement a **Many-to-Many relationship between Users and Tasks**.

- **Database Schema:**
 - **users:** `id`, `name`, `role` (admin/employee).
 - **tasks:** `id`, `title`, `description`, `status` (pending, in_progress, completed).
 - **task_user:** A pivot table linking `user_id` and `task_id`.
- **API Endpoints:**
 - **GET /api/users:** List all employees (for the assignment dropdown).
 - **POST /api/tasks:** Create a task and "sync" it with an array of user IDs.
 - **GET /api/my-tasks/{userId}:** Fetch tasks assigned to a specific user.
 - **PATCH /api/tasks/{id}/status:** Update the status of a task.

Frontend (React & Material UI - MUI)

- Admin View:

- A "Create Task" form with a Multi-Select dropdown to choose which employees are assigned.
- A dashboard showing all tasks with the names of assigned employees on each card.
- Employee View:
 - A "My Work" board.
 - Buttons to toggle a task status (e.g., a "Start" button that moves status to `in_progress`).

5. Evaluation Criteria

We are not looking for perfection, but we are looking for:

1. Relational Integrity: Did you correctly implement the pivot table and `belongsToMany` relationship?
2. API Communication: Does your React frontend correctly handle the JSON responses from Laravel?
3. State Management: Does the UI update immediately when a task is assigned or completed?

6. Recommended Learning Path

If you get stuck, research these terms in order:

1. Laravel Migrations: "Creating pivot tables in Laravel."
2. Eloquent Relationships: "Defining Many-to-Many with `belongsToMany`."
3. Laravel API Resources: "Returning relational data in JSON."
4. React `useEffect` & `Axios`/`Fetch`: "How to call an API on component mount."

Implementation Tip

For the Admin vs. Employee distinction, you don't need to build a complex Login system yet. You can simply add a toggle in your React UI that says "View as: [Admin | Employee]" to switch between the two dashboard views.

OFFICE RULES

- BE RESPECTFUL AT ALL TIMES
- ALWAYS BE KIND
- STAY ORGANIZED
- MAKE YOURSELF PRESENTABLE
- LISTEN CAREFULLY WHEN GIVEN INSTRUCTIONS
- IF YOU HAVE AN ISSUE, ADDRESS IT POLITELY
- ALWAYS ACKNOWLEDGE VERBAL AND NON VERBAL INSTRUCTIONS
- HELP EACH OTHER
- LEARN FROM YOUR MISTAKE
- WORK QUIETLY
- DO NOT WEAR ANY EARPHONES WHILE WORKING
- AVOID USING CELLPHONE IF ITS NOT RELATED TO WORK, ALWAYS ASK APPROVAL FROM YOUR SUPERVISOR IF YOU HAVE IMPORTANT CALLS OR MESSAGES
- MINIMIZE VOICES AND BACKGROUND MUSIC
- ADDRESS EVERYONE WITH MAAM AND SIR
- ASK APPROVAL FOR LATES AND ABSENCES
- CLEAN AS YOU GO
- DON'T BE LATE
- ENJOY YOUR COFFEE
- ALWAYS DO YOUR BEST!
